

Formula

*For deep vein health and reduction of swelling during long-term airplane flights**

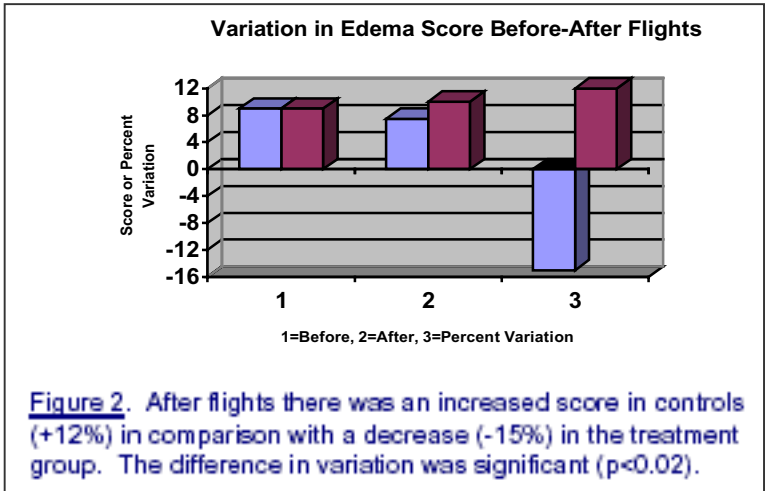

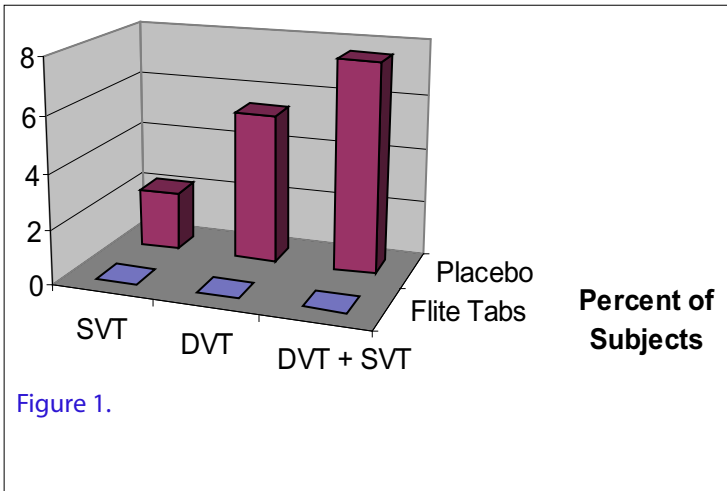

Deep vein thrombosis (DVT) can strike any long-distance traveler---regardless of physical condition, age, or gender. Nicknamed the "Economy Class" syndrome, DVT is not just confined to those flying economy class. First-class passengers are also at risk, as are long-distance auto and rail travelers. Headlines the world over have focused on the dangers of air travel as these news items demonstrate...

London's Heathrow Airport reports one passenger death a month from DVT. One nearby hospital recorded thirty passenger deaths from DVT in the past three years, including a 28-year-old man.

DVT is the fourth leading cause of strokes in the United States. Approximately 2,000 Americans died from travel-related DVT-induced strokes last year! (No one knows how many deaths were not properly attributed to DVT.)

At Narita Hospital near Tokyo's International Airport, records show an average of 100 to 150 passengers are treated for DVT immediately upon arrival each year; 3% to 5% of those die.

In a randomized, controlled study of subjects on international long-haul flights, Flite Tabs™ significantly promoted vein health and reduction of leg swelling.¹

Flite Tabs Formula

Each Capsule Contains:

- Pinokinase (Proprietary Blend) 150 mg
- Pycnogenol*
- Nattokinase.*

Suggested Intake: Take 2 tablets 2 hours before flight by mouth with 8 oz. of water, then take 2 tablets 6 hours later.

Other Ingredients: Stearic acid, silica and magnesium stearate.

Caution: Not intended for use by pregnant or lactating women. Do not take excessive amounts. If you have a history of blood clotting or bleeding problems do not use this product without first consulting your doctor.

Form: 8 Tablet Dietary Supplement
